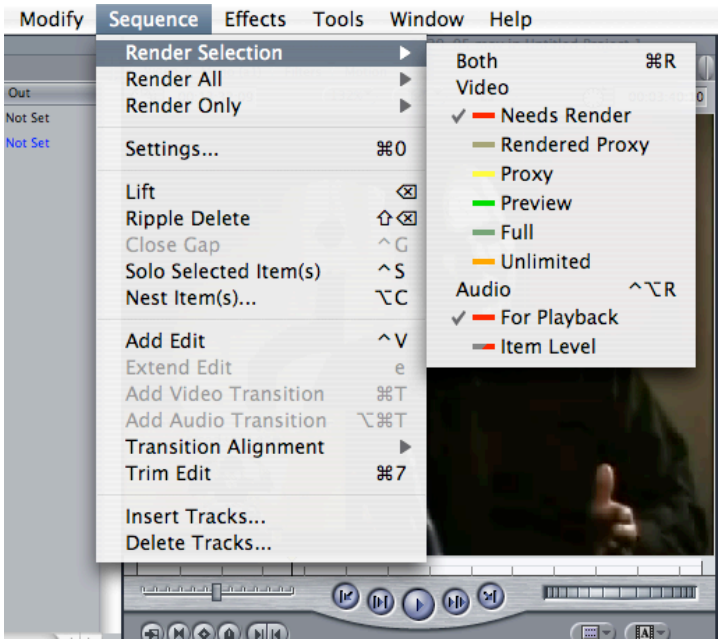
Render Settings in Final Cut Pro.

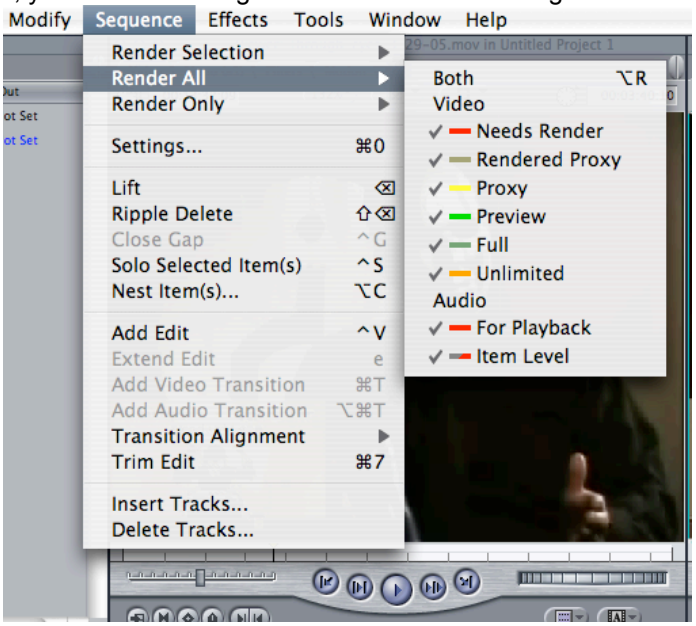
Render settings should already be set correctly in Final Cut Pro. However, if you notice FCP not rendering correctly, double check to make sure it is set up properly. It can save a lot of hours of irritation.

What should I look for?:

1) Go to "Sequence->Render Selection (or Render All) "

You should see several types of render settings. **ALL** of these render types should be selected (with a check mark). Selecting some versus others will increase render time, and the computer will preview a lot of these in real time, but all will eventually have to be rendered, and the default setup in the Duderstadt Center is to have all of them selected at all times.





2) When you have done so, your render settings should look like the image below
